

CLAIMS

1. A complex of protein-protein interaction as defined in columns 1 and 3 in Table 2.
2. A complex of polynucleotides as defined in Table 1 encoding for the polypeptides.
3. A recombinant host cell expressing the interacting polypeptides of said complex of protein-protein interaction of claim 1.
4. A method for selecting a modulating compound comprising:
 - (a) cultivating a recombinant host cell on a selective medium containing a modulating compound and a reporter gene the expression of which is toxic for said recombinant host cell wherein said recombinant host cell is transformed with two vectors:
 - (i) wherein said first vector comprises a polynucleotide encoding a first hybrid polypeptide and a DNA bonding domain;
 - (ii) wherein said second vector comprises a polynucleotide encoding a second hybrid polypeptide and an activating domain that activates said toxic reporter gene when the first and second hybrid polypeptides interact; and
 - (b) selecting said modulating compound which inhibits the growth of said recombinant host cell.
5. A modulating compound obtained from the method of Claim 4.
6. A pharmaceutical composition comprising the modulating compound of Claim 5 and a pharmaceutically acceptable carrier.
7. A record comprising all or part of the data set forth in Tables 1 and 2.
